

Schedulite

Task Prioritisation App for Students

Done by : Weijie & XiangLing

Problem Background

Polytechnic and university students often face:

- Multiple overlapping deadlines
- High academic workload
- Stress and procrastination
- Difficulty deciding task priority

Although students may list their tasks, they often struggle with planning and time management, leading to missed deadlines and burnout.

Problem Statement

Polytechnic and university students often juggle multiple academic and co-curricular commitments. Many struggle to prioritise tasks effectively, leading to poor time management, increased stress, and reduced academic performance. This application provides a simple and structured platform to help students organise and prioritise their tasks, allowing them to focus on what needs to be done first.

Target Users & Needs

Polytechnic students

Guidance on
what to work on
first

A centralised
platform for all
academic tasks

Clear
prioritisation of
tasks

Reduced
cognitive load
when planning
daily work

Project Objective

Help students
prioritise tasks
automatically

Improve time
management
and
productivity

Generate a
structured
schedule based
on urgency

Reduce stress
caused by
decision fatigue

Proposed Solution

A centralised task management system

Automated task prioritisation logic

System-generated daily and upcoming schedules

A system to guide their workflow.

Introduction

Schedulite is a task prioritisation and scheduling application designed to help students manage their academic workload more effectively. Students today manage multiple deadlines across modules, CCAs, and personal commitments. Schedulite focuses on helping students decide what to work on first, not just what to work on.

Schedulite

Key Features

Creating, editing, and deleting tasks

Assigning due dates, priorities, and categories

A “Today’s Plan” view showing what to work on first

Automatic task sorting based on urgency

Task Prioritisation Logic

Tasks are prioritised using the following logic:

- Earliest due date first
- Higher priority tasks first (High - Medium - Low)
- Task creation order as a tie-breaker
- This ensures urgent and important tasks are always addressed first.

Task & Schedule Integration

Workflow:

- Student creates tasks
- System applies prioritisation logic
- Schedule is automatically generated
- Any task update dynamically updates the schedule
- The schedule is not manually created by the user.

User Workflow (Student)

User Workflow (Admin)

Admin user flow

System Architecture

Frontend

React with React Router

Backend

Node.js and Express (RESTful API)

Authentication

JWT

Database

MySQL

Security

bcrypt password hashing with salt

Demo Overview

Challenges & Learning

01

Encountered technical issues during development

02

Resolved through team discussion and external resources

03

Adopted a divide-and-conquer approach with regular check-ins

Thank
you
